

## Come and visit Epta @National Convenience Show 2024

2024-05-04

May 2, 2024

Epta UK makes its debut at the National Convenience Show, scheduled from April 29th to May 1st at the National Exhibition Center in Birmingham.

As part of the UK Food and Drinks Show, The National Convenience Show is the biggest event for the convenience-retailing sector, a single platform for the whole market to come together - suppliers, wholesalers and retailers. It's the only place to see, sample and source the convenience store specific innovations that will drive the future of this vibrant retail sector.

The exhibition will feature innovative solutions for the convenience retail market and will be combined with numerous live events, presentations and panels held by industry experts across five stages within the exhibition centre.

### EXHIBITING SUSTAINABLE INNOVATION BY EPTA

On display at Stand S25 in Hall 6, Epta presents 'Innovation reloaded: the Epta Sustainable System'.

Epta are delighted to showcase our complete UK offer across all aspects of commercial refrigeration. Highlights include the latest developments in natural refrigeration with energy optimisation, digitalisation, and sharing our latest in sustainable innovation.

Our best-in-class model, Tango, will be taking centre stage. As a direct result of Epta's innovation journey to produce World class products, the Tango achieves a Class A energy rating making it the pick of the product range for convenience retailers.

Also on display, the Glee 42 upright beverage showcase. Visually stunning, a hero in our food and beverage range and a concrete example of digitalization, equipped with total connectivity thanks to LineON, a digital platform by EptaService, providing secure remote performance telemetry and control.

And finally, The UNIT, a World's first plug-in countertop refrigerator designed solely on the principles of the circular economy and the 4Rs: Reuse, Repair, Recondition, and Recycle. An innovative concept and a tangible example of our sustainable innovation. It's End-of-life friendly and 95% recyclable, the model has revolutionary features, employing no refrigerants.

"We're delighted to announce our participation at the National Convenience show and we're excited for the event. As a leader in the UK across all aspects of commercial refrigeration, we believe our complete thinking across the full customer journey, and our approach to sustainable innovation supports the sectors drive to minimising environmental impacts, while giving retailers and their customers the experience they are expecting" Says Rory Kroon, UK Marketing Manager.
