Chillventa2024, Epta As Fully Integrated Provider

09 Sep 2024

Epta presents its vast range of technologies, solutions and services during the new edition of Chillventa, the leading international trade show focused on refrigeration, air conditioning, ventilation and heat pumps for commercial and industrial applications, positioning itself as Fully Integrated Provider.

This prestigious trade show, scheduled to take place in Nurnberg from 8 to 10 October, is a unique opportunity to exchange knowledge and expertise between the numerous players of the sector, in line with the motto "Chillventa Connecting Experts". The professionals of the sector are called to actively participate in the rich program of more than 200 presentations, which will be held during the "specialist forums" and at the Chillventa Congress on 7 October.

The presentations will focus on numerous topics, including the following of particular importance:

- a comparative analysis of the latest legislative developments in Germany, Europe and globally;
- detailed analysis of the thermodynamic properties of the different cooling fluids;
- the focus on green transition, natural refrigeration, energy performance, sustainability, circular economy, eco-design and digitisation.

A COMPREHENSIVE, INTEGRATED AND NATURAL TECHNOLOGICAL OFFER

On show at Stand 7-332, Hall 7, is the comprehensive, integrated and natural technological offer branded Epta with rigorously natural refrigerant solutions and compliant with the New F-Gas regulation.

Epta's offer, historically based on R290 propane and carbon dioxide R744, used respectively in plug-in cabinets of the Group and in refrigeration packs and remote cabinets, also includes Integral natural refrigeration solutions with air and water condensation, equipped with pre-assembled refrigeration unit in the cabinet, to guarantee faster installation and excellent energy performance.

Stand 7-332, Hall 7, will transform into a display cabinet focused on natural refrigeration, conceived to highlight the Group's consolidated experience in the industrialisation of green solutions not only with CO₂, of which Epta confirms itself to be the absolute leader, but also R290. Epta's goal has always been to minimize the environmental impact of commercial refrigeration thanks to a virtuous model of Sustainable Innovation with tangible benefits.

Chillventa is the ideal opportunity for Epta to exhibit the fullness of the Group's recipe for success which, focused on the "Innovation Reloaded. The Epta Sustainable System" concept, goes far beyond mere supply, working alongside the Client at every stage of the project: from the ad hoc design of the most advanced refrigeration systems thanks to the consulting work of EptaTechnica, to their installation by a specialised Commissioning Team, to the after-sales assistance and to digital diagnostics guaranteed by EptaService. Epta positions itself as the single point of reference for Operators of the Retail, Food & Bev and Ho.Re.Ca sectors worldwide.
