## Eurocryor launches Twin Mini SV for compact fresh food retail spaces

Eurocryor has introduced the Twin Mini SV, a new semi-vertical island cabinet designed for high-margin fresh products in smaller retail environments. The model expands the Ambienti line and is tailored for stores with limited floor space, including those without a machine room.

The Twin Mini SV is available in both standard and Integral versions. It features transparent backs and shelves aimed at increasing impulse purchases by enhancing product visibility. The Integral version includes a built-in refrigeration unit, enabling quick installation without structural modifications.

The launch is part of Eurocryor's broader effort to re-engineer its Twin range, which now meets energy class C requirements. The Twin cabinets support dual temperature operation, including 3M1 class, allowing the simultaneous display of various food categories. Their design also supports cross-merchandising by accommodating dry products on top.

Other models in the Twin family include the Twin Midi SV, suited for supermarkets, with options for one or two transparent shelves. It is offered in various finishes and panel styles, including stainless steel, painted, textured, and laminate. The Twin SV model, available in two heights, is aimed at larger retail spaces and offers increased display volume.

The cabinets use sustainable refrigerants: carbon dioxide in ductable models and propane in Integral units. According to the company, all solutions reflect Eurocryor's commitment to environmentally responsible refrigeration technology.
